

FOOTWEAR WORKBOOK  
**FALL / WINTER**

Over the past 40 years we've equipped and sponsored many of the world's top athletes across all of our product categories. From the elite in various Alpine and Nordic winter sports, to adventure racers and outdoor professionals.

# HIKING

Halti hiking shoes are tailored for exceptional comfort and performance. Our comprehensive line of hiking shoes is thoughtfully engineered to excel in various challenging terrains, boasting high-traction rubber outsoles and torsion support. Choose from a wide array of styles and performance levels, including lightweight, breathable textile shoes and durable, supportive leather boots. The ruggedness of the terrain and the demands of the journey dictate the necessity for robust footwear.

# URBAN OUTDOOR

Halti's Urban outdoor shoe collection consists of multifunctional hybrid sneakers. These shoes excel in a variety of environments, making them ideal for short hikes in challenging terrains, speed trekking, trail running, and urban adventures, perfectly suiting the active lifestyle of our customers. They offer a combination of lightweight design, comfort, and sustainability, making them the top choice for the new generation of outdoor enthusiasts.

In the Fall/Winter season, many of our styles are enhanced with DrymaxX® construction, ensuring our customers to maintain their training and walking routines, even when the weather takes a turn.

## 054-3023 AVENTURA DX M HIKING SHOE

E58

P99

Casual style lace-up water repellent walking boot works outdoors and in city, combining comfort and technical features. This mid-cut walking shoe sports new DrymaxX Lite construction: breathable and waterproof membrane is laminated on upper softshell material, with seams minimized and taped. Construction is lighter, more breathable, yet gives very good protection from rain and wet grounds. Halti GripmaxX Hiker rubber sole with sock absorbing Phylon midsole provide comfort, and excellent grip on uneven and loose surfaces.

# WINTER LIFESTYLE

Halti winter boots are crafted to thrive in the harsh Scandinavian winter, conquering snow, slush, ice, and all the challenges these conditions bring. These winter boots empower their wearer to maintain active outdoor lifestyle, even in sub-zero circumstances. Every style features Drymax® construction coupled with a warm textile lining because keeping feet dry is fundamental to preserving warmth. The Halti GripmaxX Arctic outsole is purposefully engineered for snow and slush surfaces, boasting a high-profile sole pattern on a durable rubber outsole, along with a thick Phylon midsole.

# MICHELIN ICE CONTROL

This collection offers a variety of shoes that share a common last and Michelin outsole, catering to diverse needs. From low-cut textile shoes to leather boots, they feature a DrymaxX® waterproof membrane and construction, making them suitable for active outdoor use despite their casual look. These shoes provide a safe alternative to spiked footwear when steady grip is required. The Michelin sole's ice control technology delivers exceptional traction on slippery surfaces, akin to car winter tires, with a self-cleaning, multidirectional pattern for effectiveness on various terrains.

054-2963 **BULI LOW DX FL IC**

P99

Buli low cut walking shoe has all you need for safe and comfortable walking in urban environment through fall and winter. Upper is recycled softshell, with Freelock safety laces, that are easy to use by one hand. DrymaxX sock construction guarantee water proofness and dry feet even in slush and rain, and Michelin Ice control sole gives best grip without spikes on all surfaces.

# SPIKE SHOES

Halti's Spike Shoes collection is designed to conquer the harshest winter conditions. When navigating wet, icy roads, spike shoes offer the safest choice for both walks and runs. Halti's GripmaxX Spike outsole features durable rubber with 17 strategically embedded carbon steel spikes, delivering unparalleled grip on icy terrain. Halti presents an extensive range of spike shoes to cater to diverse customer preferences and needs. Whether it's low or mid-cut styles, with laces or zippers, there's a perfect option for everyone. All our spike shoes are equipped with a waterproof DrymaxX® membrane and sock construction.

054-2944 **YUKON LOW DX SPIKE SHOE**

P99

Waterproof and lightweight low-cut spike-shoe with Freelock safety lacing system. Upper is recycled softshell, made of PET-bottles. DrymaxX waterproof membrane on textile lining keeps feet dry all day. Phylon midsole is shock absorbing and lightweight, and rubber outsole has carbon steel spikes embedded for best possible grip on ice and snow. Instead of standard laces Freelock speed lacing system makes dressing and fitting easy and fast, and laces are secured not to open in middle of walks

# KIDS

Halti kids' shoes are designed for effortless use, as well as easy maintenance. It's essential that even children as young as 3 years old can independently put on their shoes. To ensure this, all our kids' shoes feature either Velcro closures, elastic laces, or a combination of both. For older kids, emphasis is on fastening and safety, especially in situations like climbing where traditional laces might come undone. Additionally, all our fall/winter shoes are waterproof because we believe that the weather should never hinder outdoor play. The inclusion of reflective details enhances visibility and safety during darkening evenings.

054-3027 ZUMA 2 DX JR SNEAKER

054-2837 INARI DX JR SNOWBOOT

P99

Premium snowboot for scandinavian winter and outdoor activities. This galosh type boot has warm textile lining, with comfy cushioning and wadding for insulation. Bottom part, so called galosh, is made of PU, so it is very lightweight compared to many snowboots. But the outsole is still rubber for excellent grip, and not just any rubber, but Vibram rubber, with design for snow and slush. Inari boot also has DrymaxX membrane, not typical for snowboots, but it does give extra assurance for waterproofness. Elastic laces make it easy and quick to dress, but also possible to adjust the fit. Reflective details in key places, of course, for better visibility.

**SIZE:**

28 – 29 – 30 – 31 – 32 – 33 – 34 – 35 – 36 – 37 – 38 – 39 – 40

**P99** BLACK

**MATERIAL:**

# DRYMAXX<sup>®</sup>

WATERPROOF. WINDPROOF.  
BREATHABLE. TESTED.

Products with the DrymaxX<sup>®</sup> logo have been designed for extreme conditions. They provide protection and comfort even in rain, wind and snow. They offer high performance thanks to a combination of the DrymaxX<sup>®</sup> material and the product's structural properties. DrymaxX<sup>®</sup> is a material featuring a membrane that prevents water from penetrating the material but permits vaporised body moisture out.

## DrymaxX<sup>®</sup> structure in footwear

Halti DrymaxX<sup>®</sup> shoes include a water-resistant, breathable and sock-like DrymaxX<sup>®</sup> structure. The DrymaxX<sup>®</sup> membrane is laminated in the lining fabric and its seams are taped. The outermost layer is selected according to the purpose of use.

# TECHNOLOGIES AND SUSTAINABILITY SYMBOLS

<b>Softshell</b>	Softshell is tradename for soft smooth water repellent textile. All softshell used in Halti footwear is made of recycled polyester from PET bottles.
<b>X-stretch</b>	X-stretch is four-way stretching special knit, in sock construction, for perfect seamless fit.
<b>360 vision</b>	360 vision means that upper is in large part made of high visual, reflective or glowing material, visible to several directions.
<b>Vegan leather</b>	Vegan leather is synthetic leather, made from recycled PU in water-based technology. It feels and looks like real leather, but is more sustainable.
<b>DrymaxX®</b>	DrymaxX® membrane is made of 100% PU without any form of fluorocarbons. Membrane is laminated to lining material of footwear. Membrane's function is based on osmosis and nanofiltering. Best practice is to use it with moisture wicking mesh lining, and technical socks (not cotton or wool). All DrymaxX® shoes are waterproof with same construction, not measured by water-pillars.
<b>BoomaxX</b>	BoomaxX is special granular form of PU, that makes very flexible and high energy return midsole material. It's more responsive and softer, and it doesn't lose its form and function within time. It is same as Boost Technology developed by BASF for Adidas originally.
<b>Freelock System™</b>	Freelock System™ is South Korean speed-lacing system. It is very easy to grasp – just turn the disc either right or left, weather you need to tighten or loosen the fit. On top of being easy and quick to do with one hand, it is also safety feature, as these laces don't come loose in middle of activity! We also offer 2 years guarantee for lace system.
<b>Memory foam</b>	Memory foam is visco-elastic PU that was originally developed by NASA for space use. It is naturally antibacterial, as it is same time very airy and soft, and so dense that bacteria don't live on it. Memory foam reacts to temperature, and takes shape of an object, forming supportive cushioning in just right shape. It is used commonly in footbeds and insoles to give extra softness and personalized comfort and support.

## SUSTAINABILITY:

- All shoes are made with vetted, Amfori audited partners.
- All shoes are PFOA and FC free
- No animal-based products are used in the production process, apart from obvious leather in leather shoes.
- Recycled textiles, EVA and rubber are used whenever possible, and water-based synthetics used always.

 <b>responsible down</b>	The product contains standardized responsible down (RDS) or recycled down.
 <b>pfc free</b>	The product is PFC free.
 <b>bluesign</b>	The product contains certified bluesign® approved material.
 <b>eco cotton</b>	The product contains organic cotton.
 <b>circular</b>	The product is designed and manufactured by the principals of circular economy.
 <b>recycled</b>	The product contains recycled material.
 <b>recyclable</b>	This product is crafted from a single material and is fully recyclable after its lifetime.
 <b>biodegradable</b>	Materials of the product are biodegradable.
 <b>renewable</b>	The product is made from renewable materials.

# GRIPMAXX OUTSOLES

- GripmaxX Anti-slip** GripmaxX Anti-slip sole unit combines shock absorbing Phylon midsole, and rubber outsole. Tread is designed for general outdoor activities in changeable weather and surface. Grooves on sole steer water away, avoiding slipping on wet surfaces. Rubber compound is semi soft, giving better grip on hard terrain, and hard arch support to prevent torsion. GripmaxX Anti-slip shoes have generous fitting.
- GripmaxX Hiker** GripmaxX Hiker sole unit is designed for uneven and loose terrain. Thick phylon midsole is flexible and shock absorbing. Rubber outsole has two different compounds; harder and more durable on toe and heel part, where more abrasion resistance is needed, and softer compound on center part for excellent grip. Torsion support in middle keeps steps steady. Lateral grooves on ball of the sole makes it flexible and comfortable in use. GripmaxX Hiker sole is developed on Halti's new last development, with excellent fit designed for hiking.
- GripmaxX Off-road** GripmaxX Off-road sole unit is designed and developed for Halti by Michelin. Michelin Soles is known for superior rubber compounds and design for purpose. Off-road is designed for trails and hiking in challenging terrain, with four-way traction tread and self-cleaning lugs. Rubber compound used in Off-road is super durable, which means it can be thinner than in traditional hiking boots, and therefore lighter. Last and midsole are same as in GripmaxX Hiker.
- GripmaxX Arctic** GripmaxX Arctic sole unit consist of thick Phylon midsole for lightness and flexibility, and grippy rubber outsole with high profile lugs, designed for snow and slush. Chevron shape lugs also give good grip on trails. GripmaxX Arctic shoes have very generous fitting, allowing toes to wiggle and space for thicker socks when needed.
- GripmaxX Ice contro** GripmaxX Ice control sole unit is designed and developed for Halti by Michelin. Michelin Soles is known for special friction rubber, also used in car winter tires. The tread of sole is also inspired by tires, giving the best possible grip on slippery surfaces without spikes. Midsole is shock absorbing Phylon, and shoes have generous fit with plenty of room for toes.
- GripmaxX Spike** GripmaxX Spike sole unit combines light Phylon midsole, durable four-way traction rubber sole, and 17 carbon steel spikes for ultimate grip on icy roads. Spikes are embedded to rubber sole during molding and placed strategically for best possible grip and function.
